

Dr. Didier Beutier is Vice-President for Economic and Prospective Studies in the AREVA Corporate Strategy Department. The team he has been leading since 2001 focuses on the assessment of short term and long term potential of nuclear energy, taking into account market trends, cost analysis, technology changes, energy policies, environmental policies and broader economics. Dr. Beutier combines 20 years' experience in the nuclear industry with expertise in process engineering, cost assessment, environmental impact assessment and energy economics.

He worked for Cogema from 1992 to 2000, rising to manager of a consulting department that offered services to the nuclear industry in cost assessments, environmental impact assessments, regulatory and policy-making issues, and public acceptance.

His prior professional experience includes process engineering in the non-ferrous metals mining and metallurgical industry (IMETAL, 1978 – 1986), process modeling for uranium enrichment, and R&D strategic evaluation for the French Atomic Energy Commission CEA (1986 – 1992).

Dr. Beutier is a Graduate Engineer of the Paris School of Mines (1971) and holds a Doctor-Engineer in Chemical Engineering (1979).
