

Rod Fisk is President and Chief Executive Officer of Transport Logistics International, Inc where he has primary responsibility for developing and maintaining the international relationships which the company requires in order to provide the enhanced expertise and support essential to clients concerned with both the front and back ends of the nuclear fuel cycle.

Fisk has extensive experience in international nuclear energy issues, having served as a senior Foreign Service Officer, working with the IAEA on non-proliferation regimes. There he obtained knowledge and experience in the fields of bilateral and multilateral Peaceful Nuclear Cooperation Agreements and import and export control regimes applicable to nuclear materials worldwide.

Mr. Fisk has served as an industry representative on U.S. Delegations to the IAEA and International Maritime Organization. He has been an active participant on Transportation Working Groups of the Uranium Institute (now World Nuclear Association) in London, where he served as Chairman of the External Advisory Group dealing with public acceptance issues.

Prior to becoming engaged in nuclear activities, Mr. Fisk obtained academic qualifications in the natural sciences, which have enabled him to interact with environmental groups from a practical and theoretical perspective, based upon extensive conservation experience.

Mr. Fisk has spent the last two decades interacting with governments and private sector representatives from countries in Europe, Africa and the Far East as they seek to implement complex legal and commercial transactions.
